

Tempo: AI Smart Calendar

By: Alan Sudhan, Harsh Aaryan, James Callender, Hariswar Baburaj, Karthik Thota, Lomesh Vanapalli, Gautham Viswanathan

Motivation

- To help students and faculty save time in manual planning
- Help students stay focused and to never forget tasks

Problems

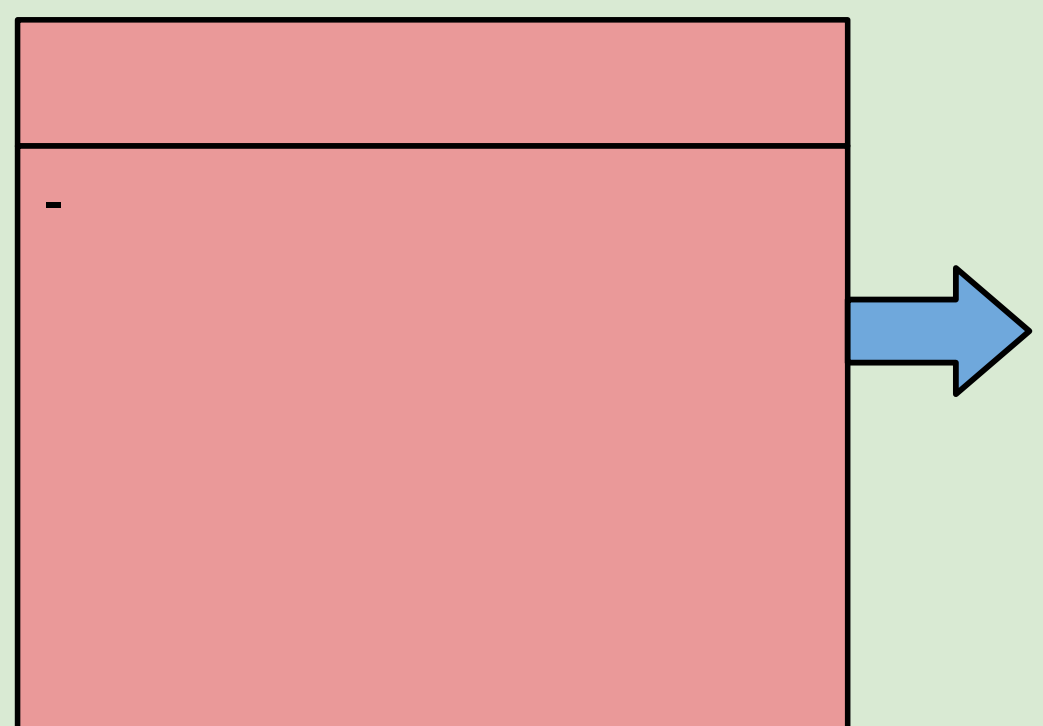

- Traditional calendar apps are passive tools as they record events and issue fixed reminders.
- Does not adapt to the user's context, location or changing priorities.

Solution

- An AI Smart Calendar that monitors real-time location, deadline proximity, and behavior patterns to actively reschedule, reprioritize, and notify the user of any events that are important.

Features

- Google Calendar/Task Integration.
 - Connects Tempo with Google Calendar and Google Tasks to sync events, deadlines, and tasks automatically.
- AI Integration using Llama 70 B parameter model.
 - Uses Llama 70B to understand user requests, optimize schedules, detect conflicts, and give smart recommendations.

Future Prospects

- We are looking to convert this web application into a mobile application for easy access to users.
- Make AI agent more intelligent. and versatile.

Conclusion

- We were successfully able to develop an working AI Smart Calendar that can record events for users and allows them to be in track.
- We also implemented smart features that help users manage their time more efficiently. The project shows how AI can improve productivity and make scheduling easier for users.
